

1. Interview Feedback:

I asked an art history graduate student to explore my original website. Overall, she responded positively to my visual style. She thought the warm, paper-like color style was comfortable to look at, and the colors, typography, and media created a consistent atmosphere. She also found the images and video engaging because they helped break up the written story and made the subject feel more visually accessible.

However, she felt that the experience was slightly passive after scrolling through several sections. Since most of the website asked the reader to read, scroll, and watch, there were few opportunities to make choices or interact directly with the content. Although she appreciated the thoughtful mood, she said the website could feel a little repetitive or boring at certain points. She suggested adding clearer navigation and simple interactive elements that would encourage readers to explore the story more actively. Her feedback helped me recognize that the visual design was successful, but the structure and level of interaction could be improved to hold the reader's attention and to be more engaging.

2. Revisions

Based on the user's feedback and my observations, I mainly added some interactive parts of the website. I reorganized the story into five connected HTML pages so that the experience feels more like turning through a newspaper. The new cover introduces the title, author, and storyteller before the reader selects "Open the Story." I also added a consistent navigation bar, page-turning links, and a progress line so readers can understand where they are and move through the story more intentionally.

To make the website easier and more comfortable to read, I narrowed the main content area, reduced the amount of text shown at one time, and added more space between sections. I kept the warm, paper-like colors that the participant found successful and made the newspaper visual style more consistent across all five pages.

I also added simple interactive elements to make the experience less passive. In the Red Pen section, readers can select three numbered marks on a real 1986 front page of Aviation News to learn how my father studied headlines, opening paragraphs, and story structures. I also added a four-step sequence: Read, Mark, Cut Out, and Save to explain how he collected useful articles in his folders. In the Snow section, readers can select Day One, Day Two, Day Three, or Afterward to reveal the story in smaller parts.

For accessibility, I added descriptive alternative text to the images, a written description for the newspaper audio, clear heading levels, current-page indicators, and a responsive layout for smaller screens. These revisions preserve the thoughtful mood of the original website while making the story clearer, easier to navigate, and more engaging for readers who do not already know my father's story.
